

ENABLING HAND HYGIENE

AT THE CRITICAL
POINT-OF-CARE

Compliance Within Arms Reach:

- Eliminates barriers to enable hand hygiene within the patient care workflow
- Helps improve staff compliance with Leapfrog and WHO hand hygiene standards
- Flexible mounting options for a variety of placements within the patient zone

The World Health Organization defines point-of-care as the place where three elements come together¹:

- The patient
- The healthcare worker
- Care or treatment involving contact with the patient or his/her surroundings within the patient zone

With the point-of-care dispenser, SC Johnson Professional™ has made it easy for healthcare workers to sanitize at each of the Your Five Moments for Hand Hygiene - before, during and after providing patient care, putting hand hygiene compliance within reach.

Your 5 Moments for Hand Hygiene, adapted by World Health Organization (WHO) guidelines for hand hygiene in healthcare.

2021 Leapfrog Updates SECTION 6D:

QUESTION #5: **Do all rooms and bed spaces in your patient care units have:**

- an alcohol-based hand sanitizer dispenser located at the entrance to the room or bed space; and
- alcohol-based hand sanitizer dispenser(s) located inside the room or bed space that are equally accessible to the location of all patients in the room or bed space?

CAN YOU CHECK YES?

1 Table Top Mount - White (for point-of-care dispenser)
