

BREAK the
CHAIN
of infection

The Covid-19 pandemic has highlighted the risk of infectious diseases and the need for a practical, targeted approach to hygiene; one that can work in combination with social distancing and facial coverings to break the chain of infection.

There is a misconception that facilities can be kept hygienic by regular cleaning of all surfaces. However, infections are mostly spread by people interacting with each other, either directly (by touch or airborne routes), or via surfaces commonly touched by others.

Effective hygiene happens when people identify the **moments** during their daily lives when infections are most likely to be spread and take appropriate hygiene action to reduce the risk of infection transmission.

Working exclusively with experts¹, we have identified **8 key moments** of high risk for spreading infection in workplaces and public facilities. In addition to frequent disinfection of commonly touched surfaces, all people working in or visiting these places can help reduce the risk of spreading infection by sanitising or washing their hands at these moments:

8 MOMENTS FOR
TARGETED HYGIENE

Touching common surfaces.

After coughing, sneezing, blowing your nose.

Returning to and leaving your workspace.

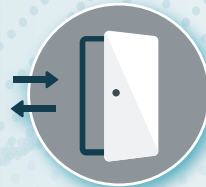

Getting food prepared.

Eating food.

Toilet use.

Entering and exiting the building.

Disposing of waste.

¹ SC Johnson Professional has worked with Prof Sally Bloomfield and the International Forum on Home Hygiene (IFH) to develop the "Moments of Hygiene for Public Spaces". Professor Bloomfield is a Consultant in Hygiene and Infectious Disease Prevention, Chairman and member of the Scientific Advisory Board of IFH and Honorary Professor, London School of Hygiene and Tropical Medicine, London, UK. Professor Bloomfield is an acknowledged expert on home hygiene, with more than 30 years' experience in hygiene research and education.
