### EFFICACY TESTS

#### Water Saving

Independent tests show that washing hands with foam soap rather than lotion soap can reduce average water consumption by as much as 45% when using a modified hand wash approach of dispensing soap on dry hands and turning the tap on only when rinsing off (SC Johnson Professional Sponsored Study: How a simple change in the washroom can significantly reduce water consumption and associated costs. Durrant and McKay, 2011).

#### Dirt Removal

The hands of healthy volunteers were pre-washed, treated with an artificial soil media and washed using a dosage of 1 shot (0.7ml) of Hygenipak Unscented. The residual dirt and cleaning efficacy, respectively was determined after each wash procedure and in this test 99.4% of visible dirt was removed.

#### Germ Removal

0.7ml of Hygenipak Unscented was tested using EN1499:2013 method on E.coli k12 for a 30 second wash time. Results show Hygenipak Unscented achieved a 2.34log10 reduction.
