HARD SURFACES

CREATE THE RIGHT ENVIRONMENT TO
ENCOURAGE YOUR WORKERS TO GIVE
THEIR BEST

Every year in the United States, more than 48 million people fall ill from foodborne diseases each year, resulting in 3000 deaths¹

Employees' hand hygiene is key to reducing the risk of cross-contamination in every step of the chain from production to plate.

This means keeping a high standard of cleanliness and enforcing it strictly. Cross-contamination and skin dermatitis outbreaks can disrupt production: brands & companies can suffer serious, irreversible reputational damage that comes with its own costs.

However, simply providing effective high-quality products isn't enough. Thanks to over 80 years of experience in professional skin care, we know that food safety workers are more inclined to use the products if they're pleasant and if they have proper training and educational tools. That's why our expertise is not only focused on simply taking care of the skin, but also on supplying highly effective formulations complying to all latest standards with a broad spectrum of efficacy, a specific range of products designed for sensitive skin, easy-to-use dispensers, along with surface cleaning solutions.

Our solutions naturally encourage compliance, which reduces risk of cross-contamination for the food processed in your facility while also promoting good skin health for your workers. Our initial site survey will ensure that the right products are located in the right place to optimize use, will increase compliance, maintaining good skin and surface cleaning conditions.

NSF REGISTRATION

NATIONAL SANITATION FOUNDATION (NSF)

A registration system indicating strict standards and procedures of sanitation based on continuous manufacturing inspections and product testing

E1: HANDWASHING PRODUCTS

- Acceptable hand wash for use in Federal meat, poultry, shell egg grading and egg products inspection programs
- Approved for hand/food contact after handwashing
- After use there can be no odor or fragrance left on hands

E2: HANDWASHING & SANITIZING PRODUCTS

- Acceptable for use as hand washing and sanitizing compound
- Acceptable for use in and around food processing areas
- Hands need not be washed prior to using
- After use and before handling food hands must be thoroughly rinsed with potable water

E3: HAND SANITIZING PRODUCTS

- Acceptable for use in and around food processing areas
- Prior to sanitizing, hands need to be washed with soap and water, followed by thoroughly rinsed with potable water
- Approved to sanitize hands handling food products without a subsequent potable water rinse

E4: HAND LOTIONS/CLEANERS NONFOOD CONTACT

- Acceptable for use as a hand cream, lotion or cleaner in nonprocessing areas
- Use of product is limited to toilets, dressing rooms and other nonprocessing areas
- Employees who handle edible products may use this product only when leaving the plant

A8: DEGREASERS OR CARBON REMOVERS FOR FOOD COOKING OR SMOKING EQUIPMENT, UTENSILS, OR OTHER ASSOCIATED SURFACES

- These caustic products generally contain cleaning solvents with objectionable odors at levels which are inappropriate for general-purpose use.
- This category allows use of those required solvents to permit their limited use on food cooking or smoking equipment, utensils, or other associated surfaces.
- Before using this compound, food products and packaging materials must be removed from the room or carefully protected.
- These products must be used in a manner so that all odors associated with their use are dissipated before food products or packaging materials are re-exposed in the area.
- A potable water rinse is required after use.

D1: ANTIMICROBIAL AGENTS ALWAYS REQUIRING A RINSE

- The products which do not fall under the D2 guidelines may be acceptable for use on hard, non-porous food contact surfaces, such as equipment and utensils, based on review by NSF.
- Before using this compound, food products and packaging materials must be removed from the room or carefully protected.
- The use of disinfectants on hard non-porous food contact surfaces such as equipment and utensils, must be followed by a potable water rinse. Such solutions must be used in a manner which does not result in the contamination of food products subsequently processed and must be consistent with the directions on the product label.
